## Driving Lesson Routes

Plan a route suited to your learner's abilities. Simply use the search tool for your location, choose the level of the pupil from beginner to advanced, and even the elements that you want to include. You can then plan the perfect route for each pupil, even if you are teaching in an unfamiliar area.

## Sketch Maps

Many learner drivers find particular road layouts a challenge. This is a powerful tool to explain specific road layouts, such as multi-lane roundabouts, or unusual road positions in your area.

# How Does The App Work?

## Create a lesson route manually

This is ideal for planning a route from your armchair! Experienced instructors can quickly create routes from memory; simply pick the starting point and plot the points to create your routes and save to your folders, and even categorise into the different folders from Beginner to Advanced, and add specific elements.

## Follow a published lesson route

Teaching in new areas can be challenging, and requires many hours of driving around to find suitable routes. Simply use the search tool for your location, choose the level of the pupil from beginner to advanced, and even the elements that you want to include. You can then plan the perfect route for each pupil, even if you are teaching in an unfamiliar area.

## Record a lesson route with a single tap

This great feature allows you to record a route with a single tap. This is of great benefit for instructors, enabling you to save the route for future use. You can even categorise the route as Beginner through to Advanced, and add specific elements such as roundabouts or manoeuvres.

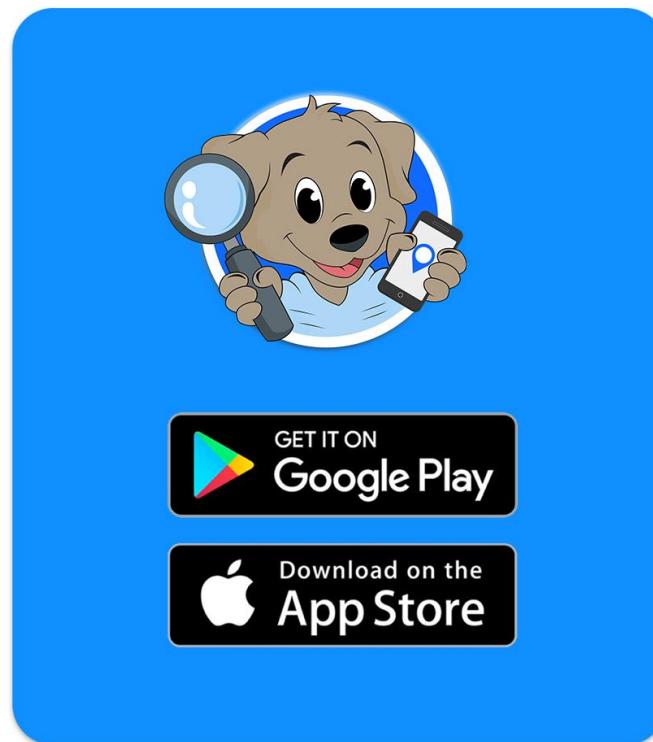

## Folders

This feature offers total flexibility! Instructors can create folders containing routes of different levels of ability from Beginner to Advanced, for specific elements such as roundabouts or manoeuvres, and even individual folders for each pupil, where you can import routes, and check off once completed.
